

ABSTRACT

Title

Device for issuing a ticket for a thermal or analogue printing mechanism, authorising the restitution of the ticket against a reverse withdrawal control

APPLICANT:

APS ENGINEERING

INVENTOR:

Denis MONTAGUTELLI

The device of the invention is a device for issuing a ticket (1) from a tape reserve for a printing mechanism. Such device implements at least one pair of rolls (2, 3) motorised (4) for driving the ticket (1) towards an evacuation opening (5) of the mechanism. The implementation of motorised means (4) for driving the rolls (2, 3) is slaved to first control means (7) for issuing A' the ticket (1) and second control means (8) for retracting B' the ticket (1). Means (10) for inhibiting second control means (8) are slaved to means (11) for detecting the moment when the user is taking the ticket (1) in the retracting path B', for authorising reverse rotational impulse of the driving rolls (2, 3) in order to return the ticket (1) notwithstanding a prior control (8) for retracting the ticket (1).
